

E-commerce-api

<https://ecommer-api.herokuapp.com/>

<u>Method</u>	<u>end-point</u>	<u>parameters</u>
GET	/categories	
GET	/categories/:id	
POST	/categories	title
PUT	/categories/:id	title
DELETE	/categories/:id	
GET	/items	
GET	/items	search
GET	/items /:id	
POST	/items	title, brand, description, price, stock, images[], category_id, sub_categories[]
PUT	/items /:id	title, brand, description, price, stock, images[], category_id, sub_categories[]
DELETE	/items /:id	

GET	/carts	
GET	/carts /:id	
POST	/carts	item_id, user_id, quantity
DELETE	/carts /:id	
POST	/users	name, email, password, password_confirmation, avatar
PUT	/users	password, password_confirmation
DELETE	/users	
POST	/users/sign_in	email, password
DELETE	/users/sign_out	uid, access-token, client
To authenticate all requests you should pass uid, access-token, client in header with every request, but this api didnt need authentication for now!.
